01 · Executive Summary

One app for the table, the bill, and the payout

Hungora is a restaurant reservations and dine-in payments marketplace. Diners discover restaurants, hold a table, and pay the bill directly from their phone — while every rupee is tracked through an automated commission and settlement pipeline, so restaurant partners are paid what they're owed on a fixed cycle without manual reconciliation.

FOR DINERS

Discover, reserve, pay — in one app

Table booking with a 5-minute hold, in-app bill payment, offers, and a wallet for fast refunds.

FOR RESTAURANTS

Automated commission & settlement

Every bill locks into an invoice, commission is calculated automatically, and payouts run on your chosen cycle.

TRANSPARENT

Discount funding is tracked three ways

Restaurant-funded, platform-funded, and bank-funded discounts are never mixed — commission is fair by design.

VERIFIED

KYC-backed onboarding

FSSAI, PAN, and Aadhar verification for every restaurant partner before they go live on the platform.

02 · The Opportunity

Booking, dining, and settlement are still three disconnected steps

Today, a diner discovers a restaurant on one channel, reserves by phone call or walk-in, and pays the bill in cash or card at the table — while the restaurant separately tallies commission owed across every offer or booking channel by hand.

The gap this leaves

Restaurants lose covers to no-shows they can't guard against, diners wait for a check that could have been settled from their phone, and commission owed to marketing or booking partners is reconciled manually at month-end — often after the discount has already changed what the restaurant actually earned on that bill.

Hungora's position: a single transaction record — from table hold to bill payment — that both the diner and the restaurant can trust, with commission calculated the moment the bill is paid, not reconstructed afterward.

Why now

UPI and in-app wallets have made instant, low-friction payment the default expectation for Indian consumers. Restaurants are increasingly comfortable with digital settlement and KYC-backed onboarding for the platforms they work with. Hungora is built for that expectation from the first transaction, not retrofitted onto a booking-only product.

Three apps, one shared ledger

Every booking and bill payment flows through the same commission-and-settlement core, whichever app it started in.

The customer app

DISCOVER Search by cuisine, city & offer Nearby restaurants with live ratings, price range, running offers, and saved favourites.	RESERVE 5-minute table hold The table locks while the deposit clears, so two diners can never book the same seat.
PAY BILL Settle the check from the table Enter the bill amount, apply an offer, pay by card, UPI, or wallet — no waiting for the check.	WALLET Balance, refunds & top-ups Cancellations and refunds land in the wallet for instant reuse on the next booking.

The Owner Portal

FLOOR Bookings, tables & menu Live booking queue, table layout, menu management, and guest reviews in one screen.	OFFERS Create offers, submit for approval Fund your own discounts, or request a platform-funded promotion for admin approval.
INVOICING Bill → locked invoice → commission Marking a bill paid locks the invoice and generates the commission record automatically.	DOCUMENTS Business documents on file FSSAI, PAN, and Aadhar stored against your restaurant profile, viewable any time.

04 · How Commission & Settlement Works

Commission is never charged on a discount you didn't fund

Every discount is tagged by who funds it. Only the portion your restaurant funds reduces your commission base — platform- and bank-funded discounts don't cost you anything.

WORKED EXAMPLE

₹2,000 dinner, 15% offer

Gross bill ₹2,000.00

Offer discount (restaurant-funded) -₹300.00

Commission base ₹1,700.00

Hungora commission (10%) -₹170.00

Restaurant receives **₹1,530.00**

`commission_base = gross - restaurant-funded discount`

`commission = commission_base × rate`

Restaurant-funded → reduces commission base

Platform-funded → Hungora absorbs it

Bank-funded → issuer absorbs it

Settlement cycle

Once a bill is paid, its commission record is held as **pending**. On your chosen cycle — daily, weekly, biweekly, or monthly — Hungora batches every pending commission into a settlement, transfers what's owed, and marks each record **settled**. Nothing is settled twice, and every settlement links back to the exact invoices it covers.

From application to your first settlement

A verified, five-step path — each restaurant is KYC-checked before it can accept a single booking.

1

Apply

Share your restaurant details, cuisine, city, and preferred commission & settlement terms.

2

Verify

Submit your FSSAI license, PAN, and Aadhar for admin review.

3

Configure

Set up tables, menu, operating hours, and your first offers in the Owner Portal.

4

Go live

Once approved, your restaurant is discoverable and bookable across the customer app.

5

Get paid

Bills settle automatically on your chosen cycle, straight to your account.

Four applications, one commission-and-settlement core

Customer App	Discovery, booking, Pay Bill, wallet, reviews	React Native · Expo
Owner Portal	Bookings, menu, offers, invoicing, settlements	React · Vite
Admin Console	Onboarding, KYC, offer approval, commissions, analytics	React · Vite
Core API	Bookings, payments, commission & settlement engine	Node.js · Express · MongoDB
Payments	Deposits, Pay Bill, wallet top-ups & refunds	Razorpay
Documents	FSSAI / PAN / Aadhar storage, restricted to admin review	Cloudinary, access-controlled

Data handling

KYC documents and identification numbers are stored separately from public restaurant listings and are only ever returned to authenticated admin or the restaurant's own owner account — never exposed through public or customer-facing endpoints.

Commission, subscription & settlement — set per partner

Illustrative structure below; final rate and cycle are agreed with each restaurant during onboarding.

PLAN	POSITIONING	COMMISSION RATE	SETTLEMENT CYCLE
Basic	Standard booking & Pay Bill listing	To be agreed	Weekly (default)
Premium	Featured placement & priority support	To be agreed	Weekly or biweekly
Enterprise	Multi-branch, custom terms	To be agreed	Custom

Settlement cycle options

Every restaurant chooses one: **daily**, **weekly**, **biweekly**, or **monthly**. The cycle can be changed later from the Owner Portal.

Default platform commission is **10%** of the commission base, calculated per bill. A restaurant-specific rate can be set at onboarding and adjusted by mutual agreement at any time.

Reserve a seat at the table

Confirm interest below and the Hungora team will begin the KYC and onboarding process for your restaurant.

PARTNER INTENT

Let's get your restaurant live.

Fill in your details below to begin onboarding — commission rate and settlement cycle will be confirmed together.
